

Our corporation

We at iconec profit from the many years of experience of our employees and advisors. At the beginning of the boom of the mobile communication possibilities, we were particularly occupied with various global C-Net and GSM/GPRS projects. In the mean time, we have become specialized in supporting EDGE-, UMTS-, HSDPA-, HSUPA- and BWA projects as well as thorough examination to assure the efficiency of such projects. Furthermore, we of course also operate competently in the fixed line network area (SDH, PDH, ATM).

The key to success lies in the right choice of the partner to advise you. For such a central decision, a far-seeing overview is necessary. The experience we gained in practice doesn't just scratch the surface – we soundly analyze each question. A solution recommendation only arises from a precise and complete analysis, which also conforms 100% to the wishes you expressed. It is important to us to design your project so that it suits your wishes perfectly.

A question can only be completely answered if the right specialist is asked. Due to our experience, we combine your wishes with the specialist trained in exactly that field. We know the special capabilities and potentials of our employees over a period of several years and therefore assure, as optimal informed “insider”, the best possible support for your questions!

Ask us your questions! We have the answers!
